**Eye Exam:**
You may not need to study before an eye exam, but having knowledge about certain risk factors and family history can certainly be beneficial. At Primary Eye Care, we ask that you update your health information and let us know about any vision changes you may have experienced since your last checkup. Our doctors have the knowledge and experience to diagnose any new conditions as well as determine your prescription for glasses or contacts. If it’s time to schedule your yearly eye exam, please let us know when your call continues. We look forward to assisting you.

**Glaucoma:**
When you’re coming down with a cold, the scratchy throat and runny nose you experience early on tell you that you’ll soon be sick. But with a disease like glaucoma, there are often no warning signs in the early stages. This is why it’s so important to have your eyes examined on a regular basis. At Dr. Brown’s office, we can detect glaucoma in the earliest stages, often before you notice a change in your vision. Then, we can take steps to slow or prevent subsequent vision loss. Thank you for relying on Dr. Brown and our staff for your eye care needs. We will be right with you.

**Laser Vision Correction:**
As popular as laser vision correction has become, you probably know someone who is enjoying the benefits of one of these procedures. Maybe you’ve even thought about looking into it yourself. If so, we invite you to schedule a consultation with Dr. Smith. She performs the most advanced LASIK techniques to reduce nearsightedness, farsightedness, and astigmatism. Dr. Smith has already helped countless patients gain clearer vision, without corrective lenses; and she will be happy to determine if you are a good candidate for the procedure. To schedule a consultation, please remain on the line and we will assist you soon.

**Cataract Surgery:**
How many pairs of glasses do you own? Are you constantly losing them, even if they are just on the top of your head? If you have cataracts and want to forget about your reading glasses or bifocals completely, Rogers Ophthalmic Associates can help. We offer AcrySof® ReSTOR® permanent artificial lenses that are inserted in the eye to replace your natural lens. The majority of our patients have reported clear vision without having to depend on their eyeglasses. If you’d like to know more about the innovative ReSTOR® multifocal lens, please ask for information when your call continues. Thank you for calling Rogers Ophthalmic Associates.

**Optical Shop:**
Just as clothing fashions change, so do eyewear fashions. If you’re ready for a new look, come browse the latest styles in eyewear at Westfield Optometry. We will be happy to help you choose your frames and tell you about the various lens options we have available. Of course, if you’d rather change your look by not wearing glasses at all, we can provide you with a contact lens fitting. We keep most types of contact lenses in stock for faster service. We will be happy to tell you more about our eyewear department in just a moment. A representative of Westfield Optometry will be right with you.

**Dry Eyes:**
Red, itchy eyes may not be just allergies—especially if over-the-counter eye drops don’t seem to help. You could have dry eye syndrome. Many times, sufferers experience light sensitivity and a gritty feeling in the eyes. But the good news is, Fayetteville Eye Care offers treatments that DO help. We will be happy to schedule an appointment for you when we return to the line.

**Diabetic Eyecare:**
Diabetes is a serious condition, and it can affect the eyes in a number of ways. One of these is diabetic retinopathy, which is caused by the effects of high blood sugar on blood vessels in the eye. Fortunately, diabetic eye conditions can be managed so that you can live life to the fullest. The professionals at Dr. Grover’s office will be happy to answer any questions you have about diabetic retinopathy and other eye conditions when your call continues.
